

HugeServer

Not Your Typical Hosting Company

Our Story

HugeServer is not your typical service-providing company. We are much more a company committed to helping you achieve your full potential and to assist the growth of your company. Alongside dedicated servers, colocation and cloud hosting solutions we offer a one-of-a-kind customer service to make sure you can fully focus on what you do best, which is running and taking care of your business. Customers from over 100 countries in the world use our solutions, which we offer from our 10.000 sf. state-of-the-art data center. Our data center is in compliance with HIPAA, PCI, and SSAE-16 certifications. The servers we utilize can be assembled to your exact specifications and are all bare-metal. Whatever we do, our main focus is to ensure the growth of your company because we understand how imperative your success is to the success of our company. What we offer is a long-lasting, fruitful and respectful partnership.

Location Diversity

Strategically located, Automated, and Redundant datacenters

Los Angeles, CA

One of the biggest colocation facilities in California, 530 West 6th Street offers the widest possible array of connectivity options, ideal for reaching clients across the entire West Coast and Asia/Pacific region.

Los Angeles is home to many of our Internet content and entertainment customers, such as motion pictures, television, video games, and recorded music firms.

Meppel, The Netherlands

One of the best-connected countries in Europe, Netherlands is the perfect location for whom demand no-compromise low-latency access to markets across the EU including the Netherlands, France, Germany, and Scandinavia, as well as adjacent nations. In Meppel, Netherlands data center HugeServer offers a full range of dedicated servers, virtual servers, premium colocation, interconnection and support services.

Jacksonville, FL

HugeServer Jacksonville data center offers direct fibers to Miami, Florida, and Atlanta, Georgia for network connectivity. Focusing on both markets at the same time. Miami is known for low latency route to Brazil and Latin American markets. Easy to reach your target markets while keeping infrastructure in the US for technology and regulatory. Atlanta is one of 6 largest hubs in the US.

What we Provide

Dedicated Servers

All of our dedicated servers are backed by 100% network and power uptime SLA. We have trained technicians both on-site and in NOC department to make sure everything is going fine. You may contact them by sending e-mail or support tickets from your client control panel - they are here 24x7 to answer you.

Colocation

HugeServer offers colocation in 3 global datacenters including with premium network backed by our 24/7 support and NOC.

Available in: Los Angeles, CA - Jacksonville, FL - Meppel, the Netherlands

VPS

Instant setup and Scalability are the key features of our VPS services. With an advanced automation system deployment is a matter of seconds. All of our VPS servers are using the industry leading virtualization technologies including VMware and KVM.

Hybrid

All of the Hybrid servers comes with dedicated resources and super fast I/O. On Hybrid servers, very few machines are created on a physical hard drive therefore, you will have the fastest experience.

ION Platform

The industry leading control panel developed by HugeServer with comprehensive features which allow you to take control of your servers from any device anywhere. No need to submit a ticket and wait hours to get KVM access or get your server rebooted anymore.

Full Power Control

Null Route

rDNS From anywhere

Automated OS Rebuilds

Support Ticket

Real-Time bandwidth Graph

Optimized Network

We believe low-latency and stable networks is what separates us from the competition. Using cutting edge technologies, the most reliable network hardware, certificated network engineers, operating a 24/7 NOC and route optimization are what make us different than the rest of the industry.

We can set up private networks for individual customers and our engineers are available to set the best network route for customers wanting a better route to their destination.
