Key features

Flexibility

We are proud that we are flexible enough to accommodate all customers requirements and create an infrastructure which leaves everyone involved satisfied. It doesn't matter if you are looking for special hardware, weird networking or something that we have never heard of, we will take care it!

ION Platform

The industry leading control panel developed by HugeServer with comprehensive features which allow you to take control of your servers from any device anywhere. No need to submit a ticket and wait hours to get KVM access or get your server rebooted anymore.

Automation

HugeServer is one of those companies that runs dedicated in-house development department to make the life easier for customers. Automation is fast, error-free and cost-efficient for both ends!

SLA+

The SLA (Service Level Agreement) covers all our services. It clearly defines our promises and the quality of service you get. Also, the service credit provided in case guarantees are not met. We take uptime and reliability very seriously.

How our Network is Optimized

We believe low-latency and stable networks is what separates us from the competition. Using cutting edge technologies, the most reliable network hardware, certificated network engineers, operating a 24/7 NOC and route optimization are what make us different than the rest in the industry.

Below you can see a network latency summary of some popular cities around the world. We can setup private networks for individual customers and our engineers are available to set the best network route for customers wanting a better route to their destination.

About HugeServer

HugeServer is not your typical service-providing company. We believe in being there for our customers 24/7 and offer exemplary customer service. Our servers, solutions, technical knowledge and the experience we have gathered from working with customers from over 100 countries will definitely leave you satisfied and ensure your company's growth.
